PROFILE

I am interested in artificial intelligence applications for the financial and banking sector, with a background in software engineering. I have expertise in advanced learning, data analytics, responsible AI, payment systems, and marketing in banks, and I am passionate about and capable of delivering ready-made, scalable, and data-driven solutions for financial services and technology.

EDUCATION

Professional Diploma in Artificial Intelligence Applications in the Financial & Banking Sector / 220 training hours

Jordan Institute of Banking Studies (JIBS) — under the supervision of the Central Bank of Jordan, 2026

Bachelor's degree in software engineering

Jordan University of Science and Technology (JUST), 2020 – 2025

EXPERIENCE

Jordan Payments & Clearing Company (MadfoatCom) .

40-Hour Training Program Successfully completed a 40-hour professional training program at Jordan Payments & Clearing Company (MadfoatCom).

- Acquired hands-on knowledge of the eFAWATEERcom payment system, including its operational processes, payment lifecycle, and integration within Jordan's national payment infrastructure.
- Strengthened expertise in digital payment systems, FinTech solutions, and financial services operations.

Clever Mind POB Company / Full Stack Development — Front-End & Back-End Intern / July 10 – October 10, 2024

- Gained hands-on experience in both front-end and back-end development.
- Worked on real-world projects utilizing modern web technologies and best coding practices.
- Learned the fundamentals of software development lifecycle and processes.
- Gained practical experience working with development tools and technologies.
- Improved coding skills by writing, testing, and debugging code.
- Built an AI-based credit risk assessment solution using Machine Learning to predict loan risk, generate explainable insights, and support transparent and responsible financial decision-making.

OTHER PROJECTS (DURING COLLEGE)

AI Project

Built an AI-based credit risk assessment solution using Machine Learning to predict loan risk, generate explainable insights, and support transparent and responsible financial decision-making

Graduation Project: Mobile Application for Electric Vehicle Charging Stations and Electric Car Spare Parts Sales Points

- Developed a mobile app to help users locate electric vehicle charging stations.
- Integrated features to find nearby sales points for electric car spare parts.
- Designed user-friendly interfaces to enhance the customer experience.
- Implemented real-time data updates and location-based services.

Web Library Management System (PHP & Java)

Created a comprehensive web-based system to manage library operations similar to a university library.

- Enabled functionalities such as book cataloging, user registration, borrowing, and returns.
- Developed backend services using PHP and Java to handle data processing and business logic.
- Designed responsive front-end pages to allow easy access and navigation.

Project: Software Requirements Engineering — Pocket Pharmacy

- Developed comprehensive documentation for a smart pharmacy application concept.
- Created detailed UML diagrams including Use Case, Class Diagram, Activity Diagram, and Context Diagram.
- Focused on modeling system requirements and workflows rather than coding.
- Provided clear visual representations to support the design and development process.

SKILLS

Programming Languages: C++, Java, HTML, CSS, Python, JavaScript, SQL, Object-Oriented Programming.

Financial AI, Responsible AI.

Microsoft Office: Excel, Word, PowerPoint, Access.

Soft Skills: Presentation, Planning, Organization, Creative Problem-Solving, Teamwork, Active Listening, Adaptability, Analytical Thinking.

LANGUAGES

- Arabic (Native)
- English
